OHP Partners with ACOEM to Hold National Summit on Health-Related Productivity Measurement

The Office of Health Policy (OHP) and the American College of Occupational and Environmental Medicine (ACOEM) convened a panel to develop recommendations on measurement of migraine-related work loss and to compare these recommendations with existing instruments. As the leading professional organization for occupational health, ACOEM is committed to advancing the field of productivity measurement. The project was commissioned by Astra Zeneca.

These recommendations represent the first product of the ACOEM/OHP collaboration on the advancement of productivity measurement. The two organizations are now planning to convene a National Summit on Health-Related Productivity Measurement. The purpose of the Summit will be to 1) determine the state-of-the-art in productivity measurement; 2) develop an agenda for research; and 3) develop strategies to achieve consensus among the wide variety of stakeholders.

Sponsorship for the program is being sought from industry, employer coalitions, government agencies, insurers, academics, and other interested parties. The audience will be accrued primarily through personal invitation. For more information on the Summit or sponsorship opportunities, please contact Laura Pizzi, PharmD, at (215) 955-1159 or laura.pizzi@mail.tju.edu.
